A
proportional hazards
reference (k = 5)
risk × constant
observed − PH-predicted MEDA
-0.5 y (95% CI -2.5 to +1.7)
Cumulative occurrence
(proportion of runs)
Age (years)
B
×0.97 per decade
(95% CI 0.90–1.05)
Hazard ratio
Age (years)
C
inherited first hit
reference (k = 5)
first hit (k = 4)
observed − PH-predicted MEDA
-3.0 y (95% CI -4.9 to -0.9)
Cumulative occurrence
(proportion of runs)
Age (years)
D
×0.86 per decade
(95% CI 0.80–0.93)
Hazard ratio
Age (years)
E
1,000 runs per group
3,000 runs per group
Change with age detected
(share of 150 repetitions)
